# Immunology

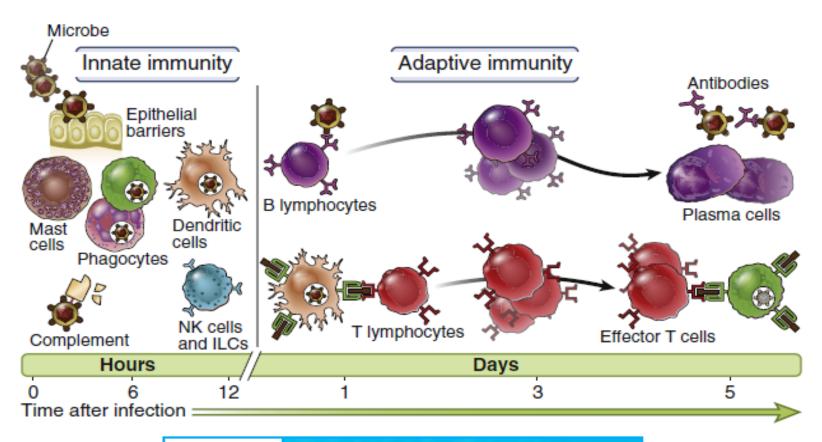

## THE DEFENCE SYSTEM

TABLE 1-4 Immunity in multicellular organisms

Taxonomic group	Innate immunity (nonspecific)	Adaptive immunity (specific)	Invasion- induced protective enzymes and enzyme cascades	Phagocytosis	Antimicrobial peptides	Pattern- recognition receptors	Graft rejection	T and B cells	Antibodies
Higher plants	+	_	+	_	+	+	-	-	_
Invertebrate animals Porifera (sponges)	+	_	}	+	?	?	+	_	_
Annelids (earthworms)	+	_	,	+	}	,	+	-	-
Arthropods (insects, crustaceans)	+	_	+	+	+	+	}	_	_
Vertebrate animals Elasmobranchs (cartilaginous fish; e.g., sharks, rays)	+	+	+	+	equivalent agents	+	+	+	+
Teleost fish and bony fish (e.g., salmon, tuna)	+	+	+	+	probable	+	+	+	+
Amphibians	+	+	+	+	+	+	+	+	+
Reptiles	+	+	+	+	?	+	+	+	+
Birds	+	+	+	+	?	+	+	+	+
Mammals	+	+	+	+	+	+	+	+	+

 $\mathsf{KEY:} + = \mathsf{definitive} \ \mathsf{demonstration;} - = \mathsf{failure} \ \mathsf{to} \ \mathsf{demonstrate} \ \mathsf{thus} \ \mathsf{far;} \ \mathsf{?} = \mathsf{presence} \ \mathsf{or} \ \mathsf{absence} \ \mathsf{remains} \ \mathsf{to} \ \mathsf{be} \ \mathsf{established}.$ 

## TABLE 1-3 Comparison of adaptive and innate immunity

	Innate	Adaptive
Response time	Hours	Days
Specificity	Limited and fixed	Highly diverse, improves during the course of immune response
Response to repeat infection	Identical to primary response	Much more rapid than primary response

#### Innate immunity

#### Adaptive immunity

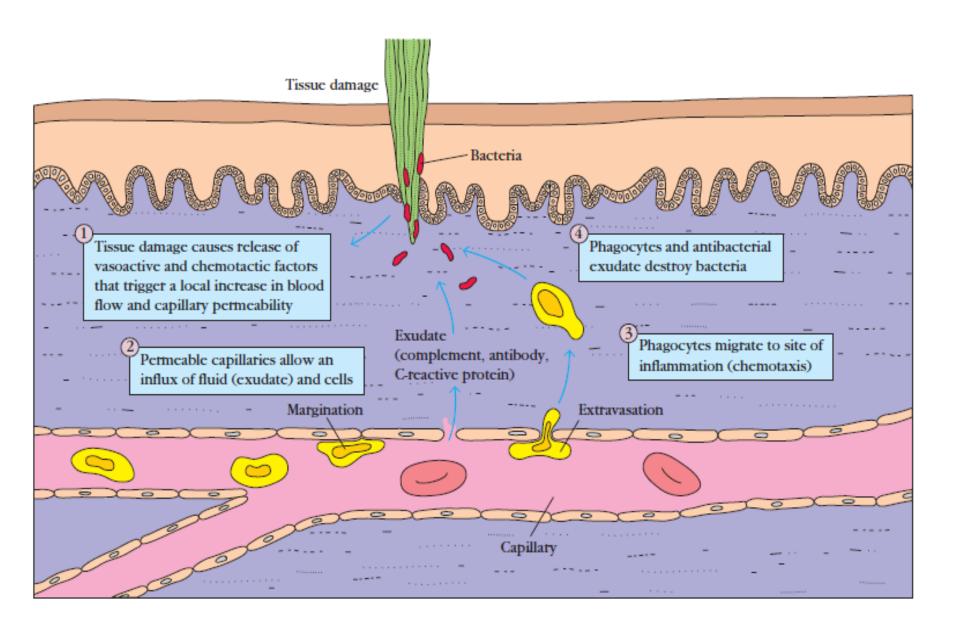

Specificity	For structures shared by classes of microbes (pathogen-associated molecular patterns) or damaged cells (damage-associated molecular patterns)  Different microbes  Identical Toll-like receptors	For structural detail of microbial molecules (antigens); may recognize nonmicrobial antigens  Different microbes  Distinct antibody molecules
Receptors	Encoded in germline; limited diversity (pattern recognition receptors)  Toll-like Mannose receptor  NOD-like receptors  Cytosol	Encoded by genes produced by somatic recombination of gene segments; greater diversity  TCR  TCR  TCR  Cytosol
Distribution of receptors	Nonclonal: identical receptors on all cells of the same lineage	Clonal: clones of lymphocytes with distinct specificities express different receptors
Discrimination of normal self and nonself	Yes; healthy host cells are not recognized, or they may express molecules that prevent innate immune reactions	Yes; based on selection against self-reactive lymphocytes; may be imperfect (giving rise to autoimmunity)

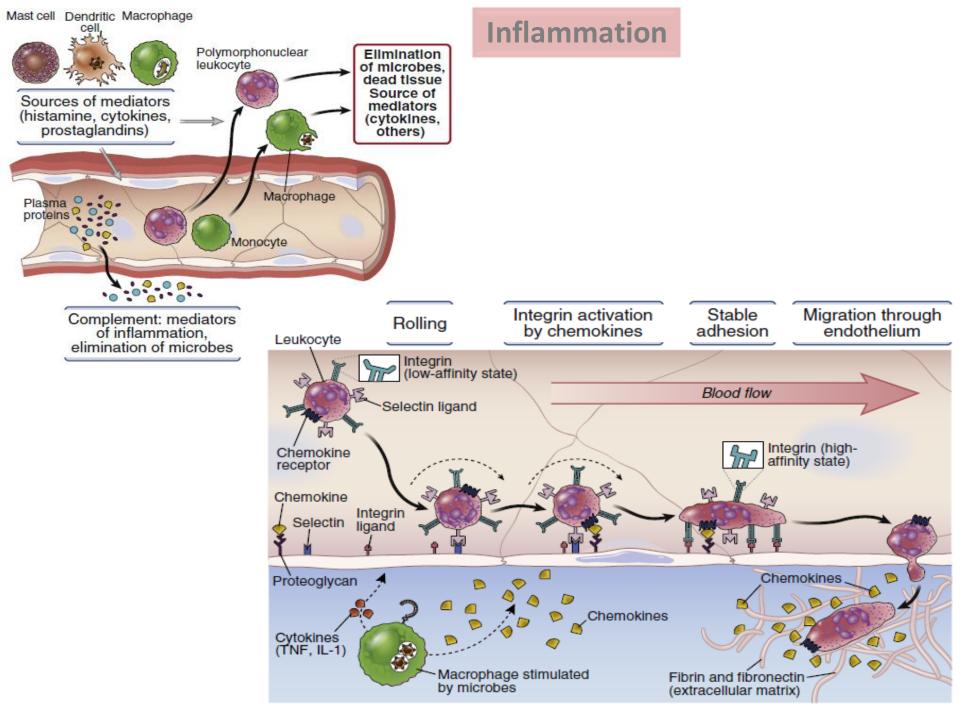

#### **Innate Response**

#### TABLE 1-2 Summary of nonspecific host defenses

Туре	Mechanism		
Anatomic barriers			
Skin	Mechanical barrier retards entry of microbes.  Acidic environment (pH 3-5) retards growth of microbes.		
Mucous membranes	Normal flora compete with microbes for attachment sites and nutrients.  Mucus entraps foreign microorganisms.  Cilia propel microorganisms out of body.		
Physiologic barriers			
Temperature	Normal body temperature inhibits growth of some pathogens. Fever response inhibits growth of some pathogens.		
Low pH	Acidity of stomach contents kills most ingested microorganisms.		
Chemical mediators	Lysozyme cleaves bacterial cell wall. Interferon induces antiviral state in uninfected cells. Complement lyses microorganisms or facilitates phagocytosis. Toll-like receptors recognize microbial molecules, signal cell to secrete immunostimulatory cytokines. Collectins disrupt cell wall of pathogen.		
Phagocytic/endocytic barriers	Various cells internalize (endocytose) and break down foreign macromolecules.  Specialized cells (blood monocytes, neutrophils, tissue macrophages) internalize  (phagocytose), kill, and digest whole microorganisms.		
Inflammatory barriers	Tissue damage and infection induce leakage of vascular fluid, containing serum proteins with antibacterial activity, and influx of phagocytic cells into the affected area.		

#### **Inflammation**

## **Acquired Response**

Ensures that distinct antigens elicit specific responses  Enables immune system to respond to a large		••		
variety of antigens	Microbe	Extracellular	Phagocytosed microbes that can	Intracellu
Leads to enhanced responses to repeated exposures to the same antigens	Responding lymphocytes	microbes	microbes that can live within macrophages	(e.g., viru replicatin infected (
Increases number of antigen-specific lymphocytes from a small number of		B lymphocyte	Helper T lymphocyte	Cytotoxic T lympho
Generates responses that are optimal for defense against different types of microbes	Effector mechanism	Secreted antibody		
Allows immune system to respond to newly encountered antigens		-\$		
Prevents injury to the host during responses to foreign antigens	Functions	Infections and eliminate extracellular	Activated macrophage  Elimination of phagocytosed	Killed in
	to repeated exposures to the same antigens  Increases number of antigen-specific lymphocytes from a small number of naive lymphocytes  Generates responses that are optimal for defense against different types of microbes  Allows immune system to respond to newly encountered antigens  Prevents injury to the host during responses to	Increases number of antigen-specific lymphocytes from a small number of naive lymphocytes  Generates responses that are optimal for defense against different types of microbes  Allows immune system to respond to newly encountered antigens  Prevents injury to the host during responses to	Increases number of antigen-specific lymphocytes from a small number of naive lymphocytes  Generates responses that are optimal for defense against different types of microbes  Allows immune system to respond to newly encountered antigens  Prevents injury to the host during responses to foreign antigens  Responding lymphocytes  Secreted antibody  Effector mechanism  Block Infections and eliminate	Leads to enhanced responses to repeated exposures to the same antigens  Increases number of antigen-specific lymphocytes from a small number of naive lymphocytes  Generates responses that are optimal for defense against different types of microbes  Allows immune system to respond to newly encountered antigens  Prevents injury to the host during responses to foreign antigens  Functions  Ilive within macrophages  Helper T lymphocyte  T lymphocyte  Effector mechanism  Functions  Functions  Functions  Ilive within macrophages

#### **Major Cells of Immune system**

#### Cell type

#### Principal function(s)

Specific recognition of antigens

- · B lymphocytes: mediators of humoral immunity
- T lymphocytes: mediators of cell-mediated immunity

Blood lymphocyte

Antigen-presenting cells:

Capture of antigens for display to lymphocytes:

- . Dendritic cells: initiation of T cell responses
- · Macrophages: effector phase of cell-mediated immunity
- Follicular dendritic cells: display of antigens to B lymphocytes in humoral immune responses

dendritic cells;

macrophages;

dendritic cells

B cells; follicular

T lymphocytes; macrophages; granulocytes

Dendritic cell

Macrophage

Elimination of antigens:

- T lymphocytes: activation of phagocytes, killing infected cells
- Macrophages: phagocytosis and killing of microbes
- Granulocytes: killing microbes

Antibody

CD3

Immature thymocyte

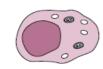

T<sub>H</sub> cell

T<sub>C</sub> cell

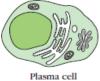

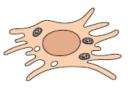

Cytotoxic T cell

Natural killer cell

Bone marrow stromal cell

Erythrocyte

Platelets

Neutrophil

Basophil

Eosinophil
